Abstract

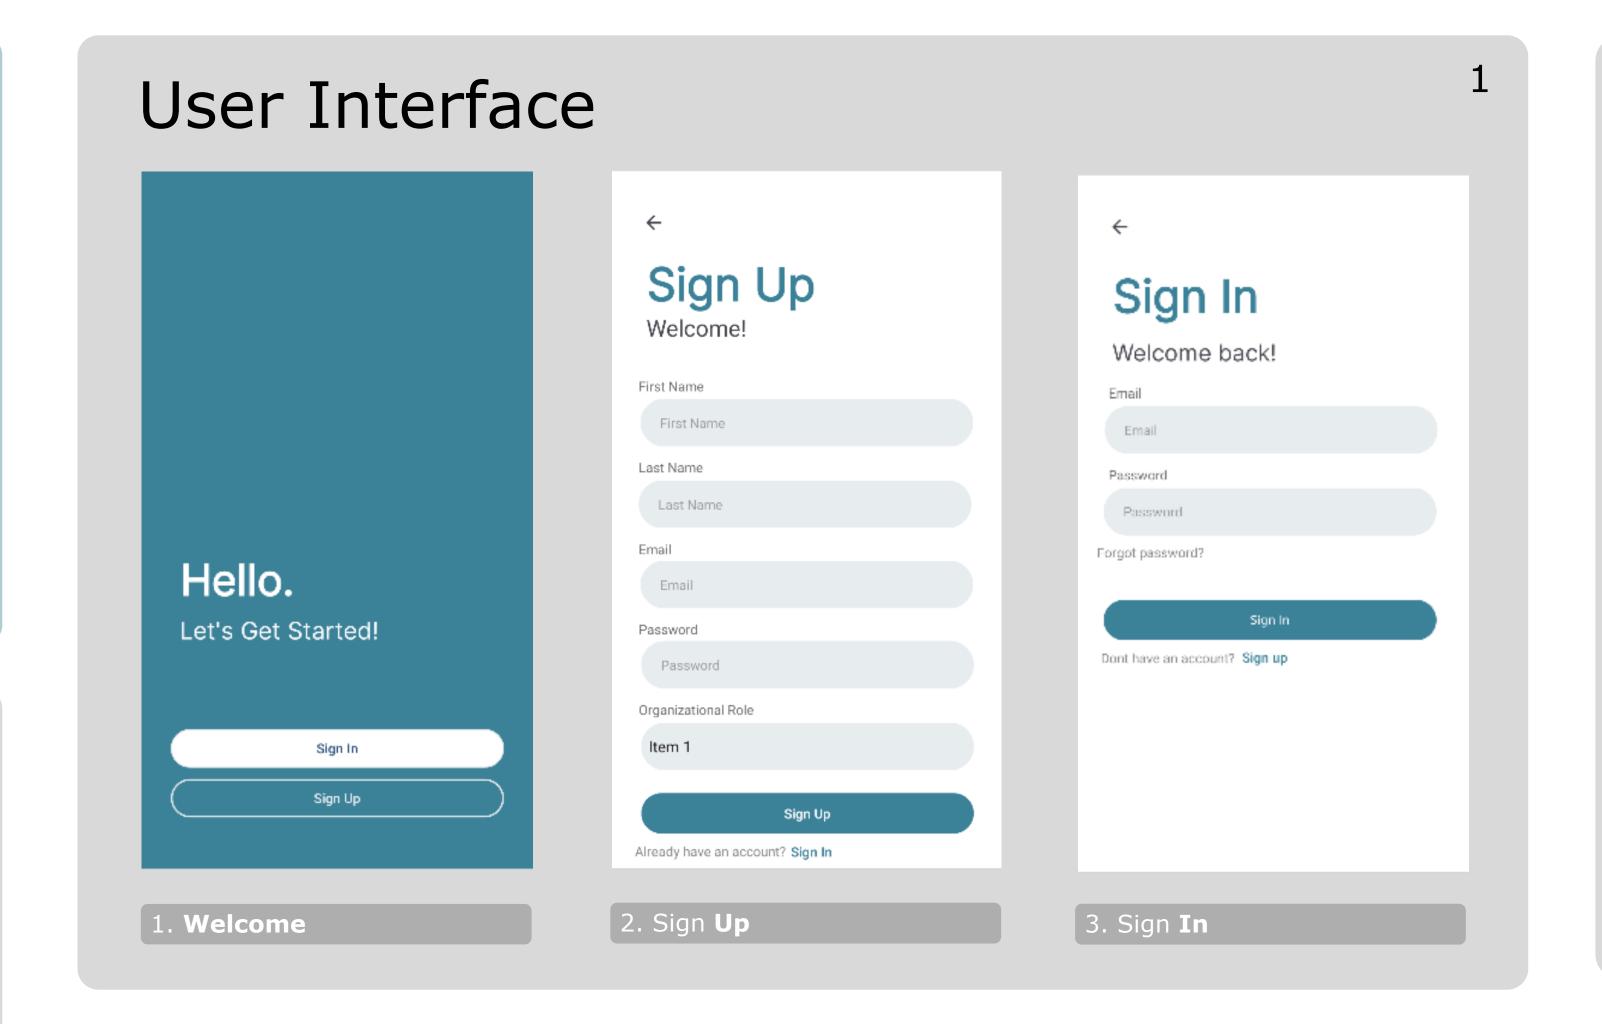

- StegerReady is a mobile application designed to assist students and staff that are studying abroad or working at the *Steger Center for International Scholarship* in Riva San Vitale, Switzerland.
- The application provides information regarding the center and local area, optimizes student experience, and supports faculty and staff in logistical functions.

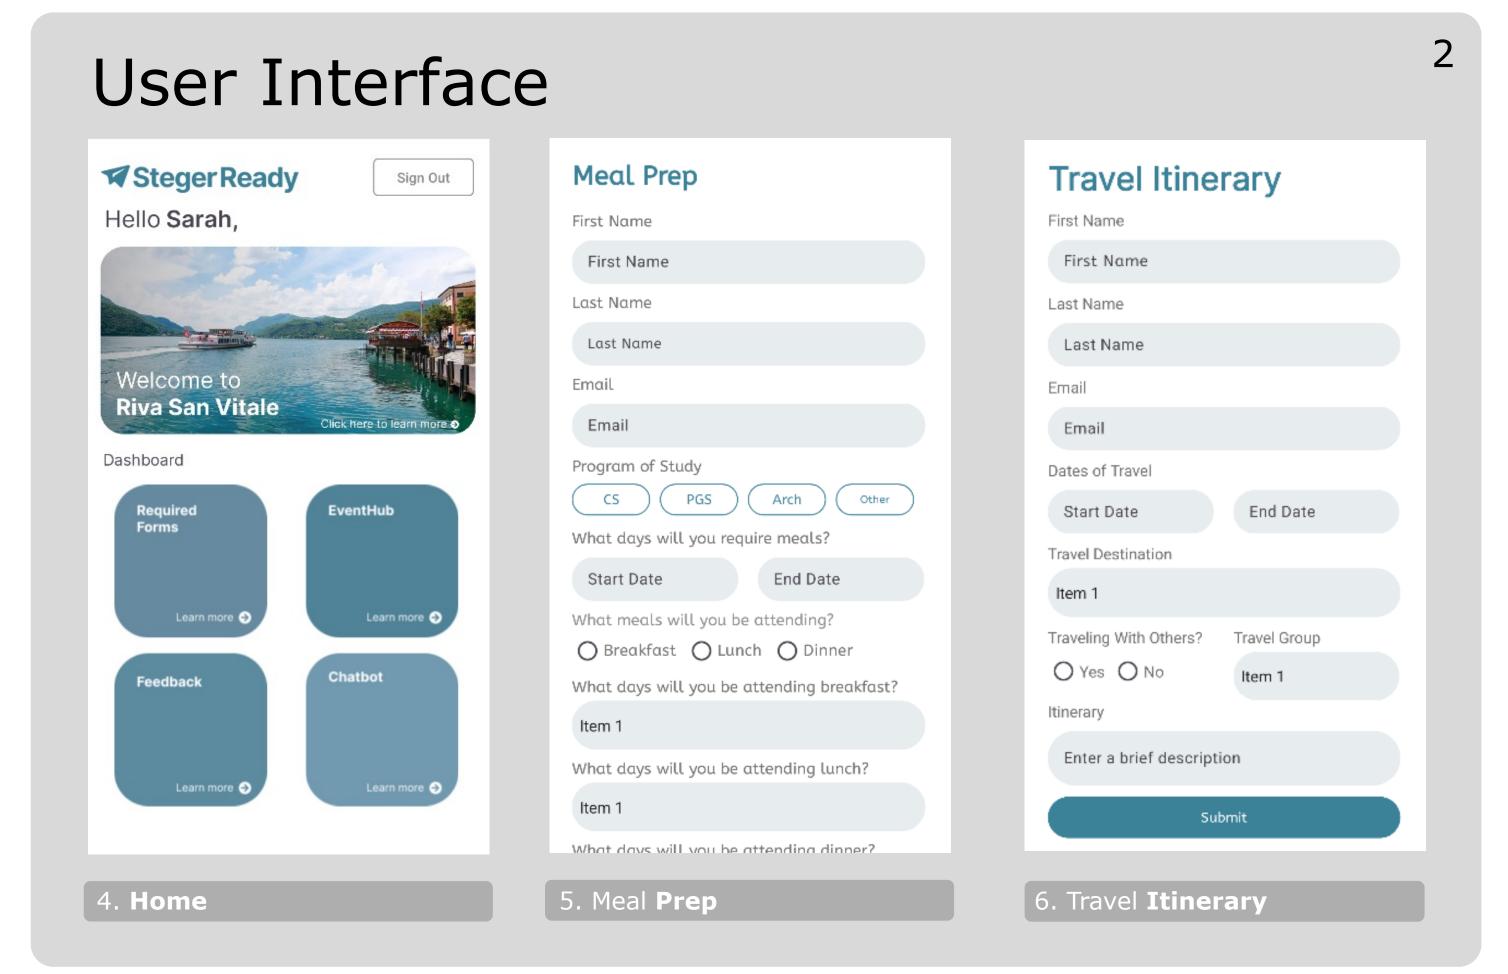

Methodology

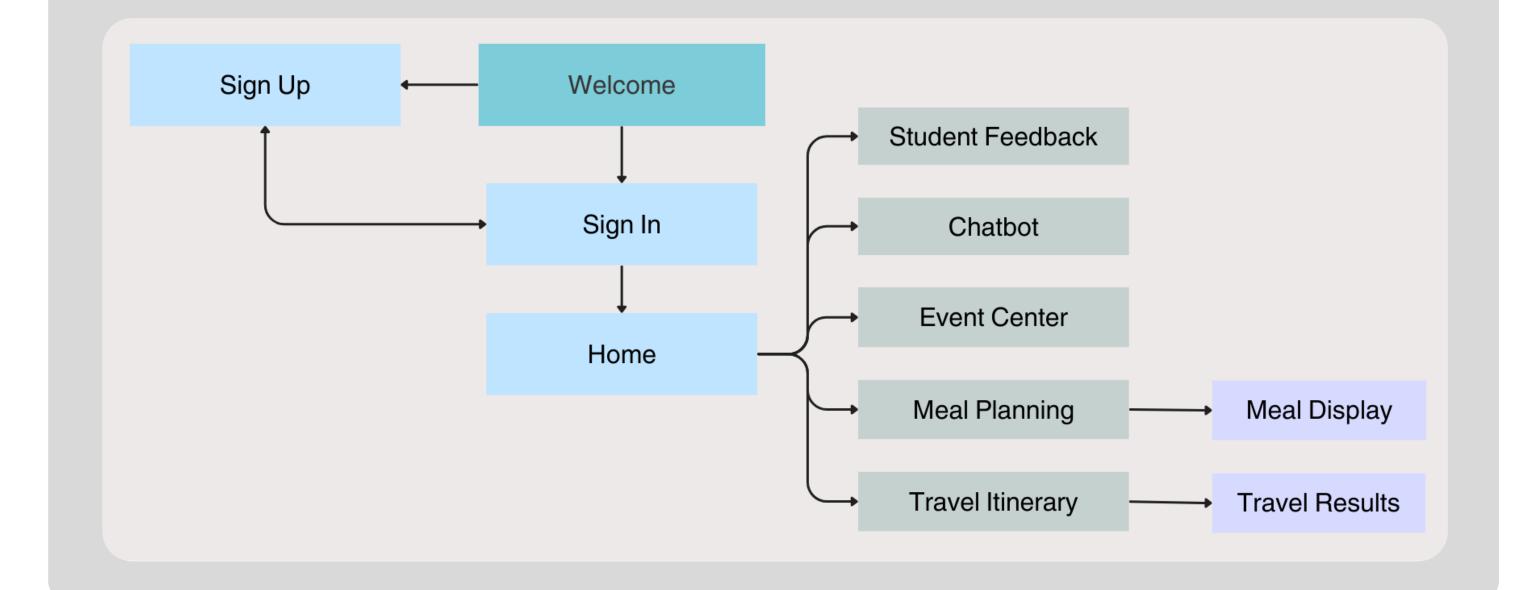

- Through frequent meetings with the directors of the Steger Center, insight on current workflow and improvements was obtained.
- The application was designed to improve the experience of Steger Center students and staff, ensuring that it fully meets their needs.

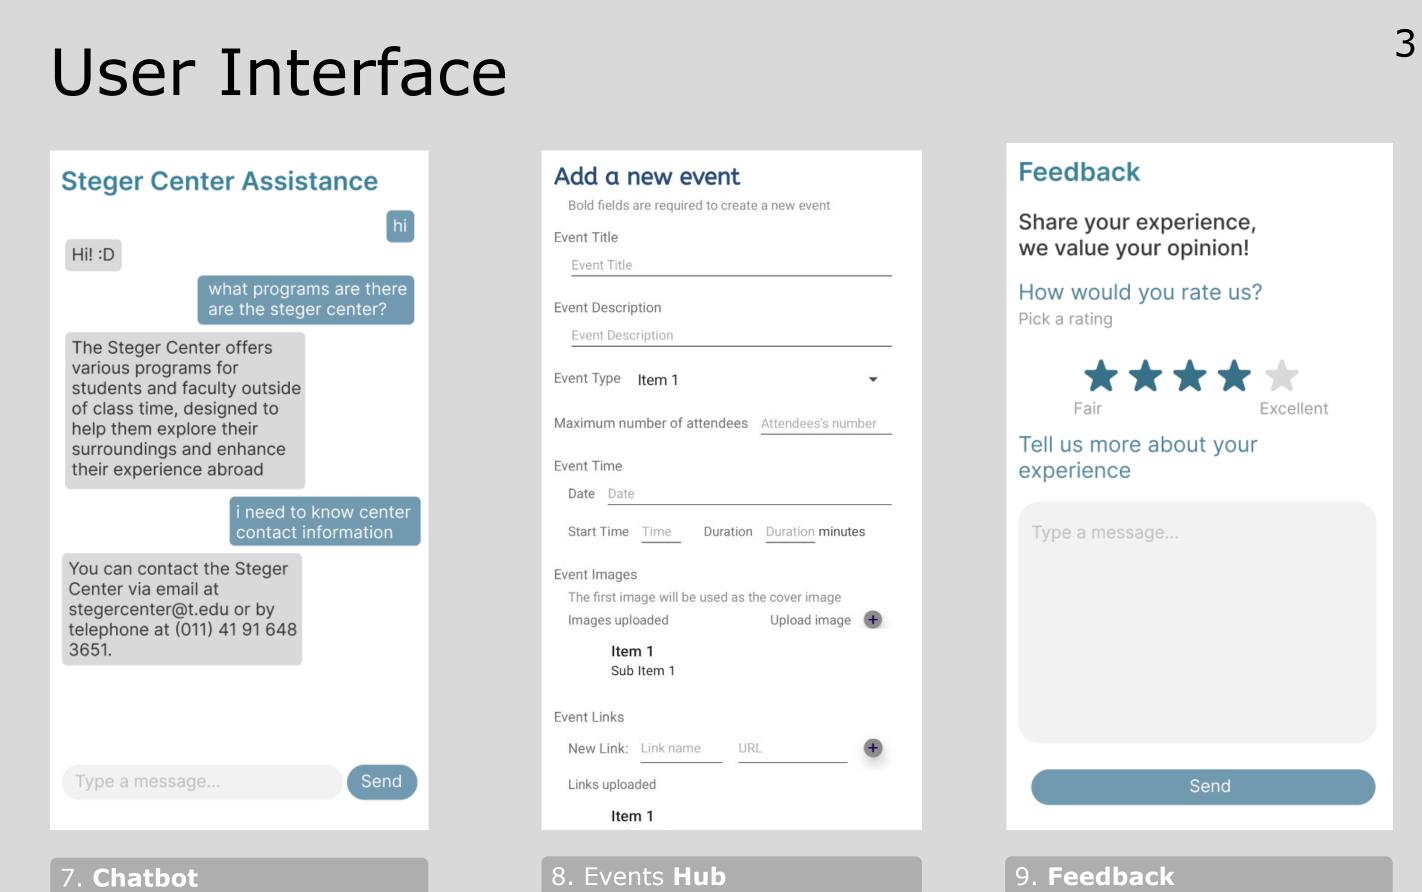

Product Features

- Meal Planning: Provides form for staff to collect data from users regarding meal schedules and dietary restrictions.
- Travel Itinerary: Provides form for staff to collect data from users regarding updates to their local travel plans.
- EventHub: A Hub that offers students and staff the ability to create, view and register for various events.
- Steger Center Assistance: A personalized chatbot that answers queries regarding program/application details, contact numbers, etc.
- Students' Feedback: Allows students to share experiences and rate Steger Center from 1 to 5 stars.

Future Goals

- Offer personalized itineraries, recommendations, and assistance, ensuring each student's journey is tailored to their unique preferences and interests.
- Expand chatbot's knowledge base and anticipate users' needs through machine learning algorithms and utilization of LLMs
